Exam : **D-DPS-A-01**

Title : Dell Data Protection Suite Achievement

Version : DEMO

1.While designing a protection strategy for remote offices that run containerized workloads, which Dell Technologies together provide source-side global deduplication, Kubernetes awareness, and policy-centric automation?
A. Avamar + PowerProtect Data Manager
B. NetWorker + Data Domain Cloud DR
C. Avamar + Data Protection Central
D. PowerProtect Data Manager + Search Administration
Answer: A
Explanation:
Avamar delivers source-side global deduplication, and PowerProtect Data Manager adds Kubernetes-aware, policy-centric protection automation. This document outlines …

2.Which two components would you use together to gain a single-pane-of-glass view of backup success metrics and run compliance reports across Avamar, NetWorker, and Data Domain infrastructures?
A. Data Protection Central
B. Data Domain Cloud DR
C. Data Protection Advisor
D. PowerProtect Data Manager
Answer: A, C
Explanation:
Data Protection Central provides centralized dashboards, while Data Protection Advisor supplies detailed monitoring, analysis, and compliance reporting across multiple backup products. This document outlines …

3.A customer needs keyword-based restores of individual emails from long-term cloud-tiered backups. Which single Dell feature primarily enables the granular search, and which product is typically hosting those cloud backups?
A. Search Administration; Data Domain Cloud DR
B. Data Protection Advisor; Avamar
C. Policy Engine; PowerProtect Data Manager
D. Cyber Recovery Vault; NetWorker
Answer: A
Explanation:
Search Administration handles keyword indexing/restore, while Data Domain Cloud DR holds deduplicated backup sets in the cloud tier. This document outlines …

4.Which Dell solution pair best satisfies the following requirements?
Replicate VMware workloads to public cloud for DR, then orchestrate a cost-effective failback once the primary site is healthy.
A. Cloud Disaster Recovery + Cyber Recovery Vault
B. PowerProtect Data Manager + Data Protection Central
C. Dell Cloud Disaster Recovery Concepts course + Data Protection Advisor
D. NetWorker + Search Administration
Answer: A

Explanation:
Dell Cloud Disaster Recovery replicates VMware VMs to public cloud and manages failover/failback, leveraging the Cyber Recovery Vault architecture for secure isolation. This document outlines …

5.When deploying PowerProtect Data Manager to protect both vSphere VMs and Kubernetes clusters, which two capabilities are natively provided without additional plug-ins?
A. Tape-library control
B. Self-service restores for data owners
C. Policy-centric protection workflows
D. Source-side deduplication across ROBO sites
Answer: B, C
Explanation:
PowerProtect Data Manager offers policy-driven protection and built-in self-service restore portals; tape handling and Avamar-style source dedupe are outside its native scope. This document outlines …
